PROGRAMMING SKILLS

- **Languages:** Python, SQL, C/C++, JavaScript, Dart, Kotlin
- **Machine Learning & AI:** PyTorch, TensorFlow, Transformer, Scikit-learn, Hugging Face, YOLO, OpenCV
- **Data Processing & Analytics:** Pandas, NumPy, SciPy, Matplotlib, NLTK, SpaCy
- **Web & Backend Technologies:** Django, Flask, FastAPI, GraphQL, Reactjs, Redis, Celery, Scrappy
- **Tools:** Git/GitHub, Jupyter Notebook, Docker, Linux, Vercel

EDUCATION

- **Bahria University, Islamabad** Islamabad, Pakistan
Bachelor of Science in Computer Science; CGPA: 3.4 / 4 *January 2021 - January 2025*

EXPERIENCE

- **Sybrid Pvt LTD** Islamabad, Pakistan
Data Science Intern *May 2024 - October 2024*
 - **Sybrid HRBot:** Developed the frontend for Sybrid HRBot using React.js and connected it with django using for internal employee query resolution.
 - **KissanBot:** Designed and implemented the frontend and created a dummy backend using Flask for testing.
 - **AudioStream Application:** Built a Django application to secure internal company data and enable audio annotation by interns.
 - **AgriVoice Tool:** Developed a tool in Django for creating a labeled audio dataset for Kissan Bot.
 - **Data Annotation:** Annotated the CS North dataset for further processing and analysis.
 - **ToonCrafter Model:** Tested stable diffusion-based ToonCrafter model on images to generate animated video frames.
- **Daxno Technologies** Rawalpindi, Pakistan
Software Engineering Intern *June 2023 - October 2023*
 - **Product Development and Prototyping:** Assisted in research, development, and prototyping of product ideas, contributing to software architecture design, feature testing, and optimization of early-stage software products.
- **Center of Excellence in Artificial Intelligence** Islamabad, Pakistan
Machine Learning Intern *September 2022 - May 2023*
 - **Audio Classification Model:** Developed and implemented an audio classification model for a government organization, contributing to enhanced data analysis capabilities.

ACADEMIC PROJECTS

- **StockGenie:** An AI-powered stock trading web application developed as a final-year project. Built using React, Django, and PostgreSQL, it features a financial sentiment analysis model (FinBERT) to extract insights from financial news. An AI trading agent leverages market sentiment and trends to execute trades. The system integrates Redis and Celery for efficient task queuing and asynchronous processing. Key features include real-time market data visualization, predictive analysis, and user portfolio management.
- **Crop Recommendation System:** Employed machine learning to offer personalized crop recommendations. Utilized comprehensive data and algorithms like decision tree and random forest, with a user-friendly interface using Python and Streamlit.
- **Resume Analyzer:** Developed an NLP project for analyzing numerous CVs. Leveraged cosine similarity and machine learning for information extraction, identifying top candidates based on employer requirements.
- **Global Talk:** Developed a real-time multilingual chat application using Flutter and Python, integrating Firebase for messaging, Google TTS for speech synthesis, and an NLP-based translation model for text and audio communication.
- **Airbnb Data Analysis:** Performed extensive data cleaning and exploratory data analysis (EDA) on Airbnb listings dataset. Identified key factors affecting pricing, occupancy rates, and customer ratings. Utilized Python (Pandas, NumPy, Matplotlib, Seaborn) for data wrangling and visualization. Applied machine learning techniques to predict rental prices based on location, amenities, and seasonal trends, providing actionable insights for hosts.
